#### From the Back Cover

In this book Mark Harrison rebuilds and analyses the Soviet economy's wartime statistical record, examining its prewar size and composition, and wartime changes in GNP, employment, the defence burden, and the role of foreign aid. Complementing classic long-run growth studies, the book compares the Soviet experience with that of other great powers. It emphasises the severity of current costs and capital losses arising from the war, which had a negative effect on GNP that persisted well after 1945. The results are based on a comprehensive analysis of hitherto closed official documents, throwing new light on the dimensions of the Soviet war effort, the comparative economics of the war, and its long-term impact on the Soviet economy.

Dry and technical essential reading

By Otavio Maia Chelotti

This book is extremely dry and technical, and a background in economics and even mathematical concepts applied to economics is definitely recommended.

It is very much a book about macroeconomical aspects of the war: how it was financed, what did the decisions regarding manpower and other resource distribution issues imply, and so on. The wealth of information regarding these aspects of the Soviet war economy make it worthwhile for anybody interested in wartime economics, despite the heavy reading.
