a great structure index for architect

By Tak Cheng Sze

This is almost the only graphically illustrated book on structural principles for architect.

Most of the structure book concentrate on calculation which are more important to structural engineer than to architect. However, this book put emphasis on structural principals and structural typology. The author uses very clear drawn illustration + table + text to illustrate different structural types.

This is a helpful resources if readers are architects interesting in structural design. The book could be more complete if real building examples are illustrated together with the diagrams.
